Summary

As a graduate of **Informatics Engineering**, I have studied and mastered **Software Design**, including **Websites, Desktop Applications**, and **machine learning**, utilizing various technologies such as **PHP, JavaScript, Java, SQL, Python, C# (ASP.NET Core)** and several other programming frameworks. I have experience in creating websites using **Laravel** as a framework and developing machine learning for my thesis, and I am familiar with the **Git** development system for project collaboration.

Skills:

Technical Skills:

- Languages : HTML, PHP, CSS, JS, Python, Java, SQL, C#.
- Technologies : Laravel, Codeigniter, ASP.NET Core, Pandas, Django, Flask, Postman, Selenium, MySQL, MongoDB
- Others : Algorithm, Jira, SDLC, White Box Testing, Black Box Testing, SpreadSheet, Flowchart, Embedded System.

Professional Experience:

PT. Vaganza Solusi Internasional

Fullstack Developer | Feb-2025 – Present

- Currently responsible for the end-to-end development and maintenance of scalable web applications, ensuring seamless integration between frontend interfaces and backend logic to meet all business objectives.
- Spearheading the modernization of the core platform's architecture to improve system performance and user experience, resulting in faster load times and higher reliability.
- Collaborating with cross-functional teams, including UI/UX designers and Product Managers, to deliver high-quality, full-stack solutions and feature updates in a fast-paced Agile environment.

Proxis Group – PT. Techno Infinity

Backend Developer | Nov 2021 – Nov 2022

- Responsible for developing and maintaining server-side logic and database management, ensuring high performance and responsiveness to requests from the frontend.
- Spearheading the optimization of API endpoints and database queries to improve system stability and reduce server response times.
- Collaborating with frontend developers and QA teams to integrate user-facing elements with server-side logic and ensure bug-free deployments.

Project Experience:

- **Jasindo** (Frontend Developer & Backend Developer - 2022)
Creating a page layout using Bootstrap 4 for the risk management feature on the JASINDO management website. This task includes designing a user-friendly and visually appealing interface to facilitate efficient risk management. It involves developing a database to support the feature, which includes structuring tables to handle various risk-related data points and ensuring proper data integrity. CRUD (Create, Read, Update, Delete) operations are implemented to allow users to easily add, view,

modify, and delete risk entries. This functionality is achieved using the Laravel 8 framework, which provides a robust backend environment for managing data interactions and ensuring a smooth user experience.

- **Risk Management Pertamina** (Frontend Developer & Backend Developer - 2022)

Creating a page layout using Bootstrap 4 for the risk management feature on the PERTAMINA management website. This involves designing an intuitive and responsive interface to manage risk-related data effectively. Developing a database to support the risk management feature includes creating tables and relationships to store and organize risk information. Implementing CRUD (Create, Read, Update, Delete) operations ensures that users can manage risk data seamlessly, using the Laravel 8 framework for robust backend functionality and smooth integration with the frontend.

- **Pamong Desa Kemendagri** (Frontend Developer - 2023)

This web application was built to provide a helpdesk for village officials to register for training programs organized by the Ministry of Home Affairs (KEMENDAGRI). To develop this helpdesk, I used Tailwind CSS to create a more appealing design and made adjustments to the interface to ensure ease of use for the website's users. Here is the [website](#).

- **Pamong Desa Kemendagri** (Machine Learning - 2023)

Pamong desa also provide assistance to village apparatus through a chatbot on WhatsApp. This involves developing a WhatsApp bot to facilitate question and answer interactions, offering a convenient way for village officials to get information and support. The chatbot includes a customized Q&A feature and a menu system to navigate various options. Additionally, the chatbot's database is built using MongoDB, which allows for flexible data storage and efficient handling of user interactions. This setup ensures that the chatbot can effectively manage and respond to queries, providing valuable support to the village apparatus. Here is the chat bot [example](#).

- **Proxis Recruitment** (Frontend Developer -2023)

Designing the page layout for PROXIS Recruitment using Bootstrap and optimizing the registration form to ensure it is responsive and user-friendly. This involves creating a clean and attractive interface that adapts well to various screen sizes and devices. The registration form is carefully tuned to enhance usability, making it easy for users to fill out their information accurately. This optimization includes implementing responsive design techniques to ensure a seamless experience across different platforms, from desktops to mobile devices.

- **Nano Healthy Family POS** (Fullstack Developer - 2025)

Developed a comprehensive Point of Sale (POS) system for a food and beverage business, utilizing a **Laravel** backend and a **Vue.js** frontend. Built a robust server-side architecture with Laravel to handle transaction processing, inventory management, and financial reporting APIs. On the frontend, created a dynamic, single-page application (SPA) with Vue.js, ensuring a highly interactive, responsive, and user-friendly interface for efficient daily operations across all device types.

- **LONGLINGO LMS** (Fullstack Developer – On Going)

Architected and built a full-featured Learning Management System (LMS) using **ASP.NET Core** for the backend and a modern JavaScript framework for the frontend. Engineered a scalable .NET backend with Entity Framework to manage complex data relationships for users, courses, content, assessments, and analytics. Developed a responsive and intuitive frontend application, providing seamless user experiences for course administration and interactive learning on both desktop and mobile platforms.

- **Other Projects:**

Besides those 4 projects, I also did many projects with many technology stacks as you can find in my github repository. The source on [GitHub](#).

Education

Universitas Logistik dan Bisnis Internasional, Bandung, Indonesia September 2017 – Agustus 2024

Bachelor of Industrial Engineering

- Thesis: Student Graduation Prediction Based on GPA (Semester Performance Index) Using Naive Bayes Method.

License And Certificates:

- SAP Fundamental.
- SAP Enterprise.
- Test of English as a Foreign Language.

Language:

- Bahasa (Native).
- English (Limited Working Proficiency).
